SQLCMD

Open CMD using "kør som administrator"

choco install sqlcmd

add: "C:\Program Files\SqlCmd\" to the Path system enviromental environment

Open CMD og kør denne kommando med forskellige brugere og se hvad de har tilladelse til

sqlcmd -S sitestserver.database.windows.net -d SItest -U USERNAME -P PASSWORD

SELECT QUERY

SELECT * FROM people

INSERT QUERY

INSERT INTO people (name) VALUES ('navn')

GO SETUP

Write "go" after every query.

Database setup:

Database:

SItest

Table:

people

people:

data_id = PK/int

name = varchar

Task:

There are 5 people currently, I want their names and corresponding data_id. And I want a new "people" entry with the name of "jacob" and an autoincrimentet data_id
